EDUCATION

Brown University A.B Computer Science and Entrepreneurship, GPA 3.94

WORK EXPERIENCE

Microsoft, *Product Manager on the CoreAI team*

July 2023 - Present

- Identified an unmet enterprise need for secure AI infrastructure and built **network isolation from zero**, designing and shipping Private Link, IP allowlists, managed/custom virtual networks, and firewall-controlled egress across Microsoft Foundry, AzureML, and Azure OpenAI, unblocking regulated AI workloads that had no viable path to production.
- Scaled the same network isolation foundation to production-grade reliability, reducing networking incidents by **57%**, supporting **5,493+ enterprise customers** across finance, healthcare, and public sectors, and enabling **200,000+ new secure connections per month** with Microsoft and third-party services.
- Used customer telemetry, security signals, and direct enterprise feedback as a system of record for roadmap decisions, prioritizing highest-leverage investments and making tradeoffs under ambiguity across a **70,000+ customer platform**.
- Launched **10 one-click Terraform templates** for secure AI model deployment, abstracting complex infrastructure setup and reducing time-to-production for large enterprise customers.
- Built an **internal AI agent** using LLMs and knowledge retrieval on Foundry's Agent Service to automate sales team responses to customer networking questions, reducing time-to-answer and improving internal self-serve support at scale.
- Drove **cross-platform integrations across Microsoft Foundry, AzureML, and Azure OpenAI**, enabling a unified secure connectivity surface across Microsoft's AI product suite and expanding ecosystem reach.
- Independently prototyped networking feature mocks using AI-powered design tools (**V0, GitHub Spark**), accelerating product discovery and reducing dependency on design bandwidth.
- Evangelized **secure AI architecture patterns** through conferences and published guidance, influencing compliant AI deployments across regulated industries.
- Worked directly with **engineering, sales, and enterprise customers** to resolve high-impact production blockers, enabling broader adoption across finance, healthcare, and public sector accounts.

Microsoft, *Program Management Intern*

Summer 2022

- Led Azure Machine Learning and Microsoft Fabric interoperability, defining requirements and driving cross-team execution to support end-to-end ML workflows within Fabric.
- Designed UX mocks and high-level spec docs outlining the user experience of sharing models and data.
- Conducted user interviews with top AzureML customers and partnered with architects, PMs, and engineers to deliver technically feasible, data-driven recommendations.

Bloomberg LP, *Desktop Build Group Quant Intern*

Summer 2021

- Built analytical applications on Bloomberg BQuant using Python, Bloomberg Query Language (BQL), and proprietary datasets for institutional market clients. Awarded Bloomberg Values Intern of the Summer.

National Institutes of Health, *Data Science Intern & Civic Digital Fellow*

Summer 2020

- Interpreted and analyzed internal NIH and FDA COVID-19 clinical trials data in Qlik Sense and Palantir Foundry.

Fidelity Investments, *Data Engineering and Software Engineering Intern*

Summer 2017, 2018

- Built GUI for database administrators to access, edit, and add metadata to databases, full stack development.
- Designed webpage in HTML/CSS used daily by database teams and hosted on local server using Angular.

LEADERSHIP

EmpowerU, *Co-founder and Chief Technology Officer*

- Co-founded an EdTech startup addressing education access gaps through tools supporting college preparation.
- Built a production web application using React Native and AWS with a small cross-functional team.

Nelson Center for Entrepreneurship, *Peer Entrepreneur in Residence*

- Mentored student founders from idea exploration through MVP development and early validation.
